

Audi TT Seat Delete Install

1. First you will need to remove your rear seats. Here is a good link showing the removal of the rear seats: <http://www.boxybutgood.com/~jeff/TT/changer/>
2. Remove the existing trunk liner and cargo net tie downs. (Save the screws as they will be reused.)
3. Once you have your existing rear seats and trunk liner removed you will now start to install your new Seat Delete.
4. Start by install the new rear trunk liner. If this does not lay perfect flat you may use the Velcro supplied in the envelope to help secure the new trunk liner.
5. There are two smaller pieces that complete the rear trunk liner that will go at each corner of the very back edge of the delete.
6. You will want to drill three pilot holes, one about three inches in on the ends and one in the middle through the front top piece to attach it to the front lower. This is so that the screws do not pull the carpet.
7. Once everything is in position line up the delete with the old cargo net tie down and re-insert the existing screws, be careful not to over tighten.

Your Euro Kreations rear seat delete is now complete! If you have any issues or comments please feel free to contact us at sales@eurokreations.com

Thank you for your business!
