

Volkswagen Golf/GTI Two Door MK4 Rear Seat Delete Install Instructions:

1. First you will need to remove your existing rear seats
 - a. Pull up and forward on the front edge to release the lower cushions.
 - b. Once up, squeeze the brackets together underneath the cushions to release them from the body of the car.
 - c. Lower the rear up rights, on each end you will see where the seats clip into the body of the car. Take a large flat head and push the collar towards the back of the car to release the seat uprights.
 - d. Once the collar is released pull up on that end and pull away from the middle of the car, the seat should start to slide away from the center support.
 - e. Once they are removed disconnect the middle seatbelt to remove the seat completely.
2. Next it's time to install the GTI rear seat delete.
 - a. First you will need to construct a raised floor to install the delete, please find AutoCAD drawing below showing the concept that we recommend.
 - b. Once the raised floor in the trunk area is complete you may now insert the top pieces in place followed by the front lower piece.
 - c. You will want to drill three pilot holes, one about five (5") inches in on the ends and one in the middle through the front top piece to attach it to the front lower. We recommend pilot holes so that the screws do not pull the carpet.

Your Euro Kreations rear seat delete is now complete! If you have any issues or comments please feel free to contact us at sales@eurokreations.com
